                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAB74126 standard; Protein; 192 AA
                                                                                                                                                                                                                                                                                                 complexes, bcl.2 associated y protein (Bax): Hax complexes, bcl.2: Bax complexes or bcl.7x; Bax complexes. Modulating apoptosis is especially useful in canner therapy, and treating autoimunity, immunodeficiency diseases (e.g. AIDS), reperfusion injury, myocardial infarction, stroke, traumatic brain injury, neurodegenerative diseases, aging, ischaemia, toxemia, infection, hepartitis, transplant rejection, and lymphoproliferative diseases. The present sequence is human Bax, which was used in a sequence alignment in the present invention, with murine was used in a sequence alignment in the present invention, with murine was used in a sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence alignment in the present sequence is not alignment in the present sequence is not alignment in the present sequence is not alignment in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US6184202-B1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human bcl-2 associated X protein (Bax)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22-MAY-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAB74126;
                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method of modulating apoptosis of a cell. The method comprises administrating to the cell an agent, comprising a BHI domain or BHI domain, capable of modulating formation of at least one complex selected from bcl-2:bcl-2 complexes, bcl-XL-bcl-XL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modulating apoptosis of a cell, useful in maintaining homeostasis adult tissues, or treating proliferative or autoimmune diseases, comprises administering a bcl-2 polypeptide that interacts with a bcl-2 associated X protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2001-256104/26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Korsmeyer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11-SEP-1997;

```

The invention relates to methods of altering the polypeptide levels in a cell, using proteins selected from S-phase kinase associated proteins 1 and 2 (SKP1, SKP2), SKP2-like proteins (ZF) and CUL-1 (a member of the cullin/ CDC53 family of proteins). The method is useful for altering the level of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or BC1-2 polypeptide in a cell. SKP2 and SKP2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for treating tumours.

This channel is a member of the BCL-2 family. Apoptosis modulators are also provided, including bel-2deltaTM and BaxdeltaTM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying apoptosis-modulating compounds by contacting the compound with lipid bilayer containing an ion channel formed by anti-apoptotic polypeptide of Bcl-2 family and determining ion selectivity of the
The present invention describes a method for screening for an apoptosis inhibitor or an apoptosis promoter in which VDAC-ilprosome, an index substance which can pass VDAC and a sample are incubated and the change in the concentration of the index substance during the incubation is detected to judge the presence of apoptosis inhibition or apoptosis promotion. The apoptosis inhibitor or the apoptosis promoter can be used as a drug and a diagnostic agent for various diseases caused by
                                                                                                                                                                                                                                                                                                                                                                             JP2000287689-A
                                                                                                                                                  Screening of an apoptosis inhibitor or promoter which can be used as drug and a diagnostic agent for various diseases caused by apoptosis inhibition or apoptosis promotion -

bci-2-associated protein x - mouse

%Alternate names: BAX; programmed cell death membrane protein x
C:Species: Mus musculus (house mouse)
C:Date: 03-May-1994 #sequence_revision 03-May-1994 #text_change 17-Nov-2000
C:Accession: D47538
R:Oltvai. Z. N.; Millhan, C.L.; Korsmeyer, S.J.
Cell 74, 609-619, 1993
Cell 74, 609-619, 1993
A:Title: Bcl-2 heterodimerizes in vivo with a conserved homolog, Bax, that & Reference number: A47538; MUID:93364978
A:Accession: D47538
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross-references: GDB:228082; OMIM:600040

bcl-2-associated protein x - rat (fragment)
NALternate names: BAX; programmed cell death membrane protein x
C;Species: Rattus norvegicus (Norway rat)
C;Date: 02-Aug-1996 #sequence_revision 02-Aug-1996 #text_change 03-Nov-2000
C;Accession: IS3295
R;Tilly, J.L.; Tilly, K.I.; Kenton, M.L.; Johnson, A.L.
Endocrinology 136, 232-241, 1995
A;Title: Expression of members of the bcl-2 gene family in the immature rat onstitutive bcl-2 and bcl-xlong messenger ribonucleic acid levels.
A;Reference number: IS3295; MUID:95129487

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score

-1- FUNCTION: ACCELERATES PROGRAMED CELL DEATH BY BINDING TO, AND ANTAGONIZING THE APOPTOSIS REFRESSOR BCL-2 OR ITS ADEMOVIBUS HOMOLOG ELB 19K PROTEIN, INDUCES THE RELEASE OF CYTOCHROME C, ACTIVATION OF CASPASE-3, AND THEREBY APOPTOSIS.
-1- SUBGURIT: FORMS HOMODIMERS AND HETERODIMERS TOGETHER WITH BCL-2, ELB 19K PROTEIN, BCL-X(L), MCL-1 AND AL.
-1- ALTERNATIVE PRODUCTS: THE MEMBRANE ISOFORM ALPHA AND THE THREE CYTOPLASMIC ISOFORMS, BETA, GAMMA AND DELTA ARE GENERATED BY ALTERNATIVE SPLICING:
-1- TISSUE SPECIFICITY: EXPRESSED IN A WIDE VARIETY OF TISSUES.
-1- DOMAIN: INTACT BH3 DOMAIN IS REQUIRED BY BIK, BID, BAK, BAD AND BAX FOR THEIR ROPAPOPTOTIC ACTIVITY AND FOR THEIR INTERACTION WITH ANTI-APOPTOTIC MEMBERS OF THE BCL-2 FAMILY.

MISCELLANEOUS: THE MAJOR SPLICE VARIANT, SPLOO-A, MAY OF 54 KDA, BUT EXHEBITS ABERRANT ELECTROPHORETI WITH AN APPARENT MO OF 100 KDA.
SIMILARITY: CONTAINS 1 SAND DOMAIN.
SIMILARITY: CONTAINS 2 HMG BOXES.
SIMILARITY: TO NUCLEAR AUTOANTIGEN SP-140.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                INDICTION: BY INTERFERON.

DOMAIN: THE HSR DOMAIN IS IMPORTANT FOR THE NUCLEAR BODY TARGETTING AS WELL AS FOR THE DIMERIZATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           INDUCTION BY INTERPERON AND MAY BE CELL CYCLE STAGES MODULATE THE SUBNUCLEAR LOCALIZATION OF THE ISOFORMS.

ALTERNATIVE PRODUCTS: 4 ISOFORMS; SP100-A/SP100, SP100-B/SPALT-212, SPALT-C AND SP100-HHG/SPALT-HHG (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING. SP100-A IS THE MORE ABUNDANT ISOFORM.

SP100-HHG CONTAINS AN ALMOST COMPLETE AND HIGHLY CONSERVED COPY OF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Graupner M., Xu H., White R.H.;

'Identification of an archaeal 2-hydroxy acid dehydrogenase catalyzing reactions involved in coenzyme biosynthesis in methanoarchaea.';

J. Bacteriol. 182:3688-3692(2000).

J. FUNCTION: Acts on oxaloaccetate, sulfopyruvate but not on pyruvate. Has a higher selectivity for the coenzyme NADH than for NADH.

-! CAPALYTIC ACTIVITY: (S)-malate + NAD(P)(+) - oxaloaccetate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       InterPro: IPR003767; ldh_2.
